WHY IT'S COOL

Photograph a product. It's in stock, sellable and findable nearby, in seconds.

An AI inventory + sales app for neighborhood hardware stores, where most stock has no barcode, and a free marketplace that shows buyers who has the exact part today.

01
Snap
Photo of a box of screws, a PVC fitting, a grinder. No barcode needed.

→

02
AI identifies
Brand, model, specs, pack size, with confidence and variant warnings.

→

03
Confirm & stock
A human confirms. Price, cost, quantity go into an append-only ledger.

→

04
Found nearby
Buyers search by text or photo: price, stock, distance, directions.

→

05
Sold, updated
Each sale updates stock in one transaction. No overselling.

$0.0004
AI cost per product photo (Gemma 4 26B, list price)

~₱48
to digitize a whole shelf (~2,000 photos)

720W ≠ 840W
Shared catalog keeps variants apart; never auto-merged

0 oversells
Atomic stock updates + idempotent sales on Postgres

AI cost per 1,000 product photos (US$)

1 photo + ~800 prompt tokens in, ~400 JSON tokens out. Public API list prices, Oct 2026.

WHY THERE IS DEMAND

Two sides with a real, daily pain, and a market nobody built this for.

Store owners

- **Most stock has no barcode:** loose nails, fittings, bolts, repacked items.
- **Inventory lives in a notebook** or the owner's head. Nobody knows what is low.
- **Affordable POS is built for cafés,** not thousands of spec-sensitive SKUs.

Buyers

- **"I need an M10 bolt now."** Which store nearby has it, at what price?
- **Today: call, message, drive around.** Trips wasted on out-of-stock items.
- **Online marketplaces take days.** Too slow for a job site.

604k
retail & wholesale MSMEs, PH (2023)

Who pays, who uses, who buys data

Pays	Neighborhood hardware stores, ₱799/mo
Free	Contractors, foremen, technicians, homeowners
Later	Brands & distributors: where their products sell

Monthly price per store vs. alternatives

Why they switch

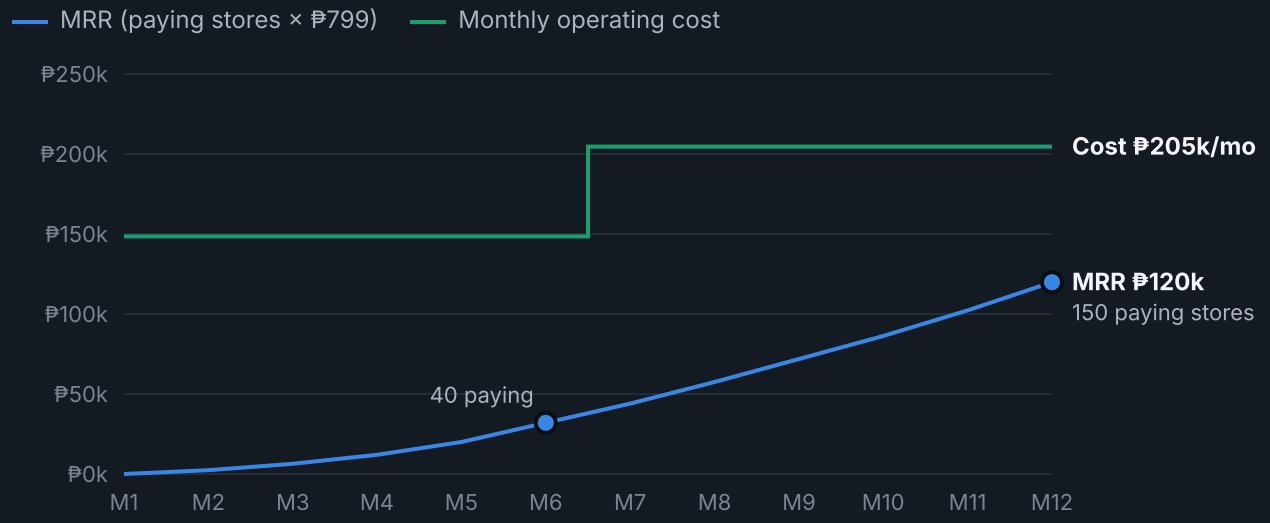

- **Cheaper** than inventory add-ons and local POS, with AI intake and buyer traffic on top.
- **Value on day one:** we digitize the shelf for free in one afternoon.
- **Stock stays fresh by itself:** stores record sales for their own control, the marketplace gets accurate data for free.

BUSINESS DASHBOARD

Cheap to run, fast payback. People are the cost, not compute.

Year 1: monthly recurring revenue vs. operating cost (₱ thousands)

Illustrative ramp to plan targets: 100 stores onboarded by M6, 300 by M12; ~50% on Pro. Break-even at ~300 paying stores, months 14–16.

~75%
gross margin per Pro store

₱1,350
cost to acquire a store (field onboarding + AI)

₱610/mo
contribution per paying store

2–3 mo
CAC payback

~5%
of spend is AI compute

₱2M
pre-seed ask (~US$34k), 12 months runway

Walk in, digitize the shelf

Free AI onboarding in one afternoon. 10 pilot stores in one Cebu area, then street by street.

Bookkeepers as champions

The "1C model": certified bookkeepers and students carry the tool to every client. 20% partner share.

AI growth agents

Agents research stores and draft outreach; a human approves first contact. SEO pages from live stock.
